

K 183 012 temperature sensor is designed for use in the normal space, for measuring the temperature in the rooms.

The sensing element (Pt 100) is placed on printed circuit boards (measuring module), which is also a terminal block for connecting the wires used to connect the sensor to the controller and a jumper to calibrate the sensor (offset the impact resistance of the wires - after calibration needs to disengage).

Module can be placed in the case with two screws.

- Sensor Pt100
- Case mounting
- Linear transfer
